

HighJump Inventory Management

Becoming Faster and More Productive—With Fewer Mistakes and Less Overtime

Speed of operations is important, especially when it comes to your ability to meet customer demands for cost reduction and shorter lead times. Staying ahead of the game requires you to link many aspects of your warehouse operations, such as receiving, putaway, and inventory control with your delivery systems. The HighJump™ Inventory Management solution gives you a powerful application for managing your distribution operations and providing real-time reporting to highlight areas for improvement, allowing you to be more accurate while also improving worker efficiency.

Create Faster, More Efficient Processes

HighJump Inventory Management optimizes processes within the warehouse, leading to streamlined movement and rotation of inventory. At the receiving dock, operations can be simplified by consolidating receipt of purchases and transfers into a single transaction. Putaway is optimized by allowing product to be directly cross-docked or stored in a warehouse location. In many cases, a more productive workforce results in the reduction or complete elimination of overtime costs which can add measurable dollars to the bottom line.

Raise Inventory Accuracy to New Levels

Inventory accuracy is directly linked to customer satisfaction. Having 99% or greater accuracy, lessens the chance of a stock-out or lost customer sale. HighJump Inventory Management provides real-time visibility into location inventory levels making it easy to quickly locate the desired product. Assure overall inventory accuracy with automatically scheduled cycle counts. Ultimately, these processes will result in a tangible improvement in inventory accuracy.

Route	Unit	Picked	Loaded	Released?	
11010103	1	0/34	0/34	No	Choose
11010104	1	0/36	0/36	No	Choose
