HIGHJUMP DOCUMENT IMAGING AND MANAGEMENT

Don't lose or misfile another important document. Use our document imaging solution to convert them into digital copies with searchable meta-data, user-definable keywords, and "entity type" classifications.

FEATURES

- Converts paper documentation into a searchable, digital format
- Designed for scalability and tuned for maximum performance
- Eliminates risk of misfiling or destroying important documents
- Powerful and adaptable infrastructure that is easy to deploy and use
- Compatible with both HighJump solutions and most third-party SQL-compliant applications
- Enables searching through user-definable keywords and "entity types"
- Familiar user interface with Microsoft office feel

STOP SEARCHING FOR KEY DELIVERABLES

Forrester Research defines document imaging software as "software for scanning, capturing, indexing, retrieving, processing and archiving digital images of documents and electronic forms."

The document imaging solution of the HighJump Supply Chain Suite allows you to break the chains of your filing cabinet and put the power of your system to work instantly retrieving the document or image that you're looking for.

The system was built using the latest in Microsoft technology, designed for scalability, and tuned for maximum performance in high-volume applications. Our document imaging solution allows you to maximize cost savings by using a single system to manage and associate your electronic documents, irrespective of the enterprise system that underlies them.

The solution empowers you to convert paper documents and forms into a searchable, digital format, thereby eliminating the risk of misfiling or destroying important documents.

It is simple to deploy and use. But, don't be fooled – its powerful infrastructure can adapt quickly to any need that your business has and help keep you competitive in today's complex market.

HighJump™
SUPPLY CHAIN NETWORK SOLUTIONS

POWERFUL META-DATA ENGINE
One of the elements that sets the document imaging solution apart is its underlying meta-data engine which defines how it associates documents with nearly any SQL-compliant enterprise application in the market today. Take advantage of the module for both HighJump solutions as well as popular applications from Microsoft, Sage, SAP, and Infor.

EXTENSIVE RETRIEVAL OPTIONS
While users will most often retrieve documents and images contextually from within the underlying application, the solution also provides powerful search capabilities to find documents based upon user-definable keywords and "entity types."

INTUITIVE USER EXPERIENCE
It's not enough to be robust – you have to be easy to use. Our innovative user interface is delivered in a browser, but acts like a familiar Microsoft Office solution that you use every day.

When you're uploading documents and associating them with records in one of the HighJump solutions, your experience will be consistent with saving a document in Word or Outlook or Sharepoint.

ABOUT HIGHJUMP
In almost every industry, buyers are becoming more fickle, and more demanding. For logistics executives, effectively meeting buyer needs has become a relentless quest for speed and agility. Traditional supply chain solutions – siloed, complex and hard-to-implement – no longer suffice, as competitors find ways to deliver goods faster and more profitably.

In this "now" economy, HighJump helps you stay agile, with adaptable, connected solutions that harness the power of your trading partner community. From the warehouse to the storefront, from the desktop to the driver's cab, we can help you achieve new levels of supply chain responsiveness, performance and profitability.

HighJump's suite of warehouse management, business integration, transportation management, and retail/DSD solutions form a complete, powerful and adaptable platform that allow you to drive growth, customer satisfaction and revenue. **HighJump: supply chain accelerated.**
