HIGHJUMP ONE PLATFORM (COMMON PLATFORM TO MANAGE MODULES)

HighJump One Product Umbrella

Modules included in HighJump One Supply Chain Advantage for **Mercantile**

- Advantage Platform

  Core HighJump platform on which other applications are built

- Warehouse Advantage

  HighJump core WMS application (handheld)

- Advantage Dashboard

  It is a Web-based portal that provides instant snapshots of your warehousing situation. Pages display crucial data and performance metrics essential for making business decisions.

- Advantage Commander

  It is a Web-based portal that provides facility to configure different devices for the system

- Advantage Fulfillment Application

  Web application for grouping orders in a wave or load and releasing waves for picking to the shop floor
  Advantage Fulfillment Application also comes as background application which does actual grouping and releasing orders. It mostly acts on requests from the web application

- Advantage Architect

  Editor tool to edit code for all HighJump WMS applications

- Page Editor

  Editor Tool to edit HighJump web applications

- Slotting Advantage

  It is a Web-based application that determines the optimal location for SKUs in a warehouse by weighing each item's velocity (such as number of picks)

- Event Advantage

  HighJump application to manage application events

- Advantage Link for Flat-File

  HighJump application to import, export csv files into/out of HighJump application

- Advantage Link for XML

HighJump Advantage Link for XML Host allows you to integrate HighJump Supply Chain Advantage (SCA) applications with a host system. HighJump Advantage Link for XML Host communicates with the host system by using an Extensible Markup Language (XML) interface through the Internet. The XML interface allows for an instant and open flow of information. As soon as the information is processed, it is converted to XML and sent through the Internet.

- Reports

  Base Reports

- Container Advantage Express

  HighJump Container Advantage Express provides a simplified solution for cartonization.

- Supply Chain Advantage inMotion

  HighJump Supply Chain Advantage inMotion provides a Cordova-based client that runs seamlessly on desktop PCs and smart mobile devices, including Android, Windows, and Apple devices in a warehouse environment. It provides a modern-looking alternative to Telnet and HighJump Advantage Web Terminal. In addition to smart phones, you can also connect to HighJump Supply Chain Advantage inMotion through a web browser using HighJump One Platform.

Other HighJump Modules to be purchased separately

- **Supplier Advantage**

  Supplier Advantage is a Web-based application that allows buyers, suppliers, and supply chain partners to communicate on a common platform about the transfer of goods. It also provides a highly configurable notification and exception monitoring capability to quickly view and correct problem areas in their supply chain. The buyer submits purchase orders into the HighJump Supplier Advantage system for the supplier to acknowledge, prepare, and ship. Administrators on both the buyer and supplier sides can maintain, view and report on order, ASN, and supplier performance data.

- **Labor Advantage**

  HighJump Labor Advantage is a Labor Management System that monitors all direct and indirect labor of workers and enables reporting on performance and utilization. You enter engineered standards and HighJump Labor Advantage uses the engineered standards to compare actual activity time to allowed time defined by the standard. You can configure the engineered standards to add time based on multiple variables like item and location attributes.

- **Yard Advantage**

  HighJump Yard Advantage is a yard management system that provides a wide variety of yard management functions that helps manage various business demands. This framework not only provides a trailer tracking functionality but also, an appointment scheduling and fulfillment capability and inventory tracking functions.

- **TMS Integration Module**

  The High Jump TM TMS Integration Module interface allows HighJumpTM Warehouse Advantage to communicate with HighJump TMS for the transportation planning of inbound and outbound orders via an XML document exchange method. HighJump TMS Integration Module sends shipment data to HighJump TMS at inbound order import and at various points of the outbound order processing lifecycle such as import, wave release, and shipping. After determining the optimal transportation plan for the shipments, HighJump TMS sends load data to HighJump TMS Integration Module and HighJump TMS Integration Module updates the appropriate HighJump Warehouse Advantage tables with the load information.

- **Billing Management**

  HighJump Billing Management (BMM) is a Web-based application that supports the business processes of an entity involved with managing the warehousing operations for a client. A typical user of HighJump Billing Management is Third Party Logistics (3PL) company.

- **HighJump Pulse**

  HighJump Pulse is a supply chain intelligence solution aimed at increasing the availability and visibility of a business' key performance indicators. Unlike other tools on the market, HighJump Pulse provides out-of-the-box best practice KPIs for the supply chain, along with the extensibility to build other KPIs specific to a business. HighJump Pulse integrates data from across an enterprise, including warehouse operations, to provide customers with self-service reporting and analysis. The flexibility of the solution allows users to start analyzing data immediately with the freedom to adapt the solution as a company grows and changes.

- **HighJump Ship**

  HighJump Ship is an integrated multi-carrier parcel and LTL shipping solution. It uses a powerful carrier rating system that allows you to automatically select the cheapest carrier, mode, and service level that meets your delivery timeframes. This solution is certified by all the major parcel carriers. HighJump Ship helps you reduce your shipping costs, improve your shipment reliability, track every shipment, and maintain valuable key performance met

- **HighJump Inspection**

  HighJump Inspection is a quality assurance solution that allows companies to automate their inspection processes for a diverse set of tasks, including the inbound receipt of goods, outbound sales orders, material handling equipment, tractors trailers, physical plant equipment, and specialized inventory. It allows the user to quickly and easily capture images at any point of the inspection process. This HTML5-based solution can be accessed on any device with an internet connection and allows you to reduce the cost of dealing with compliance and regulatory requirements (i.e., C-TPAT inspections for international transactions, outbound trailer condition to customers, etc.). You will drive continued improvement of quality systems and performance to benefit both the buyer and producer. It will also allow you to improve the performance of suppliers and product quality to minimize product loss, rejects, chargebacks and recalls.

- **HighJump Schedule**

  HighJump Schedule is a resource scheduling solution that provides a set of tools to help you cost-effectively move from a manual appointment system to full automation of the process. Its web-centric design allows users to quickly and easily book an appointment based on customizable business rules for any type of resource (e.g.dock doors, manufacturing machinery, material handling equipment, etc.). External carriers and vendors can log into the portal to schedule a date,

time, and dock door for deliveries or outbound orders based on parameters set by warehouse operations. Improve efficiency, improve throughput, increase asset utilization, access historical data, and improve visibility into the schedule and availability of resources – all with HighJump Schedule.

- **HighJump Skytrack**

  HighJump SkyTrack allows you to manage and track your shipments as drivers deliver them. That includes tracking drivers in your over-the-road fleet, tracking final deliveries in a campus setting, or tracking electronically-connected common carriers. This module allows you to execute routes, communicate with drivers in real-time and provide real-time GPS location data on your shipments. Sign-on-glass technology will allow the driver to capture proof of delivery and automatically push updates to customers and dispatchers. HighJump SkyTrack provides a complete history using GPS location data detailing the entire trip, giving you the ability to easily manage all of your deliveries.
