

# HIGHJUMP™ ESSENTIALS FOR SUPPLY CHAIN ADVANTAGE

Take Full Advantage of the Supply Chain Advantage Suite

## BENEFITS

- Fully integrated with other HighJump™ Supply Chain Advantage (SCA) applications or it can be deployed stand-alone
- Our adaptable platform allows extensive latitude to tailor solutions to your business' needs

HighJump Essentials is a portfolio of supply chain execution solutions. Our Essentials product line is fully integrated with other HighJump™ Supply Chain Advantage (SCA) applications and can also be deployed stand-alone.

HighJump has long recognized that no two businesses are alike. As a result, "inflexible" packaged software often provides a less-than-perfect solution. Our adaptable HighJump One platform affords our customers extensive latitude in tailoring their solutions to meet their specific business needs. With Essentials, we wanted to take that theme a level deeper. That led us to create a series of applications that give our customers a set of building blocks that can be used to assemble solutions tailored to meet their specific needs – and that offer the flexibility to be used in conjunction with our SCA applications or on their own.

## HIGHJUMP IMAGE

HighJump Image automatically stores scanned or printed documents and electronic forms, archiving the data electronically for easy indexing and retrieval to track compliance standards.

The Image module allows you to break from the chains of your filing cabinet and capitalize on the power of your system, instantly retrieving the document or image that you're looking for. These documents can then be stored, searched and viewed through OCR technology. An intuitive user experience with a powerful meta-data engine makes extensive retrieval options possible.

## **HIGHJUMP INSPECTION**

HighJump Inspection is a quality assurance solution that allows companies to automate their inspection processes for a diverse set of tasks, including the inbound receipt of goods, outbound sales orders, material handling equipment, tractors/trailers, physical plant equipment, and specialized inventory. It allows the user to quickly and easily capture images at any point of the inspection process.

This HTML5-based solution can be accessed on any device with an internet connection and allows you to reduce the cost of dealing with compliance and regulatory requirements (i.e., C-TPAT inspections for international transactions, outbound trailer condition to customers, etc.). You will drive continued improvement of quality systems and performance to benefit both the buyer and producer. It will also allow you to improve the performance of suppliers and product quality to minimize product loss, rejects, chargebacks and recalls.

## **HIGHJUMP PULSE**

HighJump Pulse allows you to create, manage and view KPI dashboards and analyze ad-hoc business intelligence using pivots, drill down, charts, and graphs.

With this module, you can measure your operation's performance and the success of your business with simple, digestible KPIs that measure people, processes, and inventory. It provides full visibility into your entire enterprise. You will be able to view historical trends and real-time metrics that inform your decision-making. It can even intersect your Supply Chain data with other external data sources (i.e., ERP, OMS, etc.).

## **HIGHJUMP REPORT**

HighJump Report provides on-demand, pixel-perfect reporting for HighJump products such as Warehouse Advantage, Retail Advantage, and Yard Advantage. Report runs as a separate application that allows the administrator to manage and configure reports and allows both users and administrators to run ad-hoc reports. It can print hard copy documents generated by the SCA suite, including OTR documents, gate passes, and much more.

HighJump Report extends SSRS with features like report versioning and user-based data filtering. It does this while providing an embedded experience with simplified management.

## **HIGHJUMP SCHEDULE**

HighJump Schedule is a resource scheduling solution that provides a set of tools to help you cost-effectively move from a manual appointment system to full automation of the process. Its web-centric design allows users to quickly and easily book an appointment based on customizable business rules for any type of resource (e.g. dock doors, manufacturing machinery, material handling equipment, etc.). External carriers and vendors can log into the portal to schedule a date, time, and dock door for deliveries or outbound orders based on parameters set by warehouse operations.

Improve efficiency, improve throughput, increase asset utilization, access historical data, and improve visibility into the schedule and availability of resources – all with HighJump Schedule.

## HIGHJUMP SHIP

HighJump Ship is an integrated multi-carrier parcel and LTL shipping solution. It uses a powerful carrier rating system that allows you to automatically select the cheapest carrier, mode, and service level that meets your delivery timeframes. This solution is certified by all the major parcel carriers.

HighJump Ship helps you reduce your shipping costs, improve your shipment reliability, track every shipment, and maintain valuable key performance metrics. You can improve your customer service while driving down operational costs.

## HIGHJUMP SKYTRACK

HighJump SkyTrack allows you to manage and track your shipments as drivers deliver them. That includes tracking drivers in your over-the-road fleet, tracking final deliveries in a campus setting, or tracking electronically-connected common carriers.

This module allows you to execute routes, communicate with drivers in real-time and provide real-time GPS location data on your shipments. Sign-on-glass technology will allow the driver to capture proof of delivery and automatically push updates to customers and dispatchers. HighJump SkyTrack provides a complete history using GPS location data detailing the entire trip, giving you the ability to easily manage all of your deliveries.

Beginning in December 2016, federal law will require commercial drivers to have electronic logging devices (ELDs). SkyTrack serves as an ELD, recording driving time, engine hours, vehicle movement, miles driven and location. This new FMCSA rule will ensure drivers do not surpass hours-of-service regulations.

## ABOUT HIGHJUMP

In almost every industry, buyers are becoming more fickle, and more demanding. For logistics executives, effectively meeting buyer needs has become a relentless quest for speed and agility. Traditional supply chain solutions – siloed, complex and hard-to-implement – no longer suffice, as competitors find ways to deliver goods faster and more profitably.

In this “now” economy, HighJump helps you stay agile, with adaptable, connected solutions that harness the power of your trading partner community. From the warehouse to the storefront, from the desktop to the driver’s cab, we can help you achieve new levels of supply chain responsiveness, performance and profitability.

HighJump’s suite of warehouse management, business integration, transportation management, and retail/DSD solutions form a complete, powerful and adaptable platform that allow you to drive growth, customer satisfaction and revenue. **HighJump: supply chain accelerated.**
