

# DISASTER RECOVERY FOR HIGHJUMP WMS IN THE CLOUD

## KEY BENEFITS

- Provides safety net for HighJump WMS in the Cloud customers
- Minimize downtime and data loss
- Reduce financial impact if your WMS fails
- Data stored in two separate locations
- Fully-managed service

As cloud-based warehouse management systems become increasingly popular, it's critical to have a safety net in place to protect this critical piece of enterprise software. If your system fails, you need a way to get up and running again before money continues to leak out of your operation.

HighJump Warehouse Management System (WMS) in the Cloud offers Disaster Recovery for that very situation. It will drive your key business processes if the WMS goes down. You chose a cloud-based system for its convenience (upgrades and patches are handled by HighJump), fast deployment and potentially lower cost. But it's extremely important to establish a plan for the worst-case scenario.

## BUILD BUSINESS CONTINUITY

Every executive knows how much money their operation would lose per hour if it stopped functioning. Modern businesses are so dependent on technology that a server failure or connection problems could knock out an entire operation for several hours or, worse yet, days.

That's why business continuity – or a comprehensive plan to return operations to normal after a disruptive event – is so critical. HighJump Disaster Recovery for WMS in the Cloud guarantees our customers will never have more than four hours of downtime or 30 minutes of data loss. That could save your business thousands of dollars, at a minimum, because it eliminates the risk of a long-term outage. For example, if one warehouse in

your network generates \$5,000 of revenue every hour, disaster recovery could be the difference between losing no more than \$20,000 and \$80,000 (16 working hours down), for example.

One incident will more than justify your investment in HighJump Disaster Recovery. There is no cap on how much money your company could lose if it lacks this security.

### UNDERLYING TECHNOLOGY

HighJump has minimized downtime and data loss by building a hyper-secure storage infrastructure. Our servers send data to a local server every four hours, then send that data out again to a geo-redundant server. That second server is located in an entirely different region in case there is a widespread regional outage at the local location. If such an outage happened, a failover will pull the data from the geo-redundant server.

Storing your data in two places means it is as safe as possible if a disaster occurs. Disaster recovery is only effective if it is backed by the right storage network.

### FULLY MANAGED SERVICE

Much like HighJump WMS in the Cloud, our team maintains the disaster recovery service. You enjoy the peace of mind of knowing your operation has a fallback plan if a technological disaster strikes and can concentrate on your other responsibilities. In other words, the same benefits that led you to choose a cloud-based solution apply to disaster recovery. When you purchase a house or a car, you protect that investment with an insurance policy. Think of HighJump Disaster Recovery as an insurance policy for your WMS.

### BARRIER OF ENTRY

Setting up your own disaster recovery system may seem like a compelling idea, but it is not cost-effective. The hardware and technical expertise needed to set up this environment is enough for most businesses to rule it out. That's why HighJump offers disaster recovery as an affordable service for our Cloud WMS clients.

If you use HighJump WMS in the Cloud, your business needs disaster recovery. Technological disasters are unpredictable and have the potential to set your business back in a big way. You've already invested in a WMS – now it's time to add an insurance policy that will ensure your business stays healthy.

### ABOUT HIGHJUMP

In almost every industry, buyers are becoming more fickle, and more demanding. For logistics executives, effectively meeting buyer needs has become a relentless quest for speed and agility. Traditional supply chain solutions – siloed, complex, and hard-to-implement – no longer suffice, as competitors find ways to deliver goods faster and more profitably.

In today's "now" economy, HighJump helps you stay agile, with adaptable, connected solutions that harness the power of your trading partner community. From the warehouse to the storefront, from the desktop to the driver's cab, we can help you achieve new levels of supply chain responsiveness, performance, and profitability.

HighJump's suite of warehouse management, business integration, transportation management, and retail/DSD solutions form a complete, powerful, and adaptable platform that allow you to drive growth, customer satisfaction, and revenue. **HighJump: supply chain accelerated.**
